

i did all the steps and only then saw the 9th step with the requirements…

so ill do the 100-150 word summary :

I understood the rules : Rule T1110 , Rule T1046
as the experiment go - for example deleting the third loggin attempt for the same ip , i accepected that the rule wont be broken and i wont see it on the dashboard.
after running through all the experiments i ran .\download_attack_data.ps1
and then waited for 60 seconds and saw 14 total findings on the dash board.
4 times rule T1110 was broken and 10 times rule T1046 was broken.
and i can see that some ips broke rule T1046 a few times … for example : 172.18.0.33 this ip appeared 3 times on the dash board breaking the same rule… which points this ip as an attacker.
